## Searching Libraries for Units Revisited

By David | August 28, 2019

0 Comment

Sunday was clearly one of those days when I should have given up and gone out (even though I would have melted) as I was being stupid when I couldn't get [IOTABuildConfiguration](#) to work, I was just doing it all wrong. Below is some of the code updated to what it should have been 😞

```
Begin
  sI SearchLibrary := TStringList.Create;
  Try
    If Supports(ActiveProject.ProjectOptions, IOTAProjectOptionsConfiguration, POC)
  Then
    sI SearchLibrary.Add(
      StringReplace(POC.ActiveConfiguration.Value[sUnitSearchPath], ';', '#13#10',
[rReplaceAll]));
    If Supports(BorlandIDEServices, IOTAServices, S) Then
      ...
```
