Software Development using Borland / Codegear / Embarcadero RAD Studio

Open Tools API: Delphi 7 has documentation...

By David | February 14, 2012

I stumbled on to something the other day that I didn't know about. Buried in the Delphi 7 (Personal for me) help directory is a help file for the Open Tools API. The contents page is broken and I can not be sure of how extensive the help is but at 2 MB there should be (and on a brief look there is) a considerable amount of information in here.

Now, obviously, if you are using the newer features of the IDE then this will be no help but if you are coding your solutions for all version of Delphi down to 7 then this could be very useful for that core information.

regards

Dave 😊
